PUREBEAU FIBROBLAST

Lifting without surgery

PUREBEAU revolutionizes its holistic approach to the natural perfection of beauty with a new breakthrough method, the PUREBEAU FIBROBLAST.

Functional principle

The PUREBEAU FIBROBLAST handpiece produces at its tip a tiny, so-called plasma flash. This flash leaps over from the tip to the skin and lets it evaporate superficially there in a tiny, micromillimeter-sized point. This superficial point minimizes the skin in its immediate vicinity.

Further points are placed and generate a reduction grid. By the way of their arrangement, these points can equalize skin excesses.

Result: the skin area is markedly sharpened.

After treatment

1-2 days after the treatment a swelling may occur. After 5-7 days, the sloughing of the wound healing process have disappeared. Slight redness is no longer visible after 3 weeks at the latest.

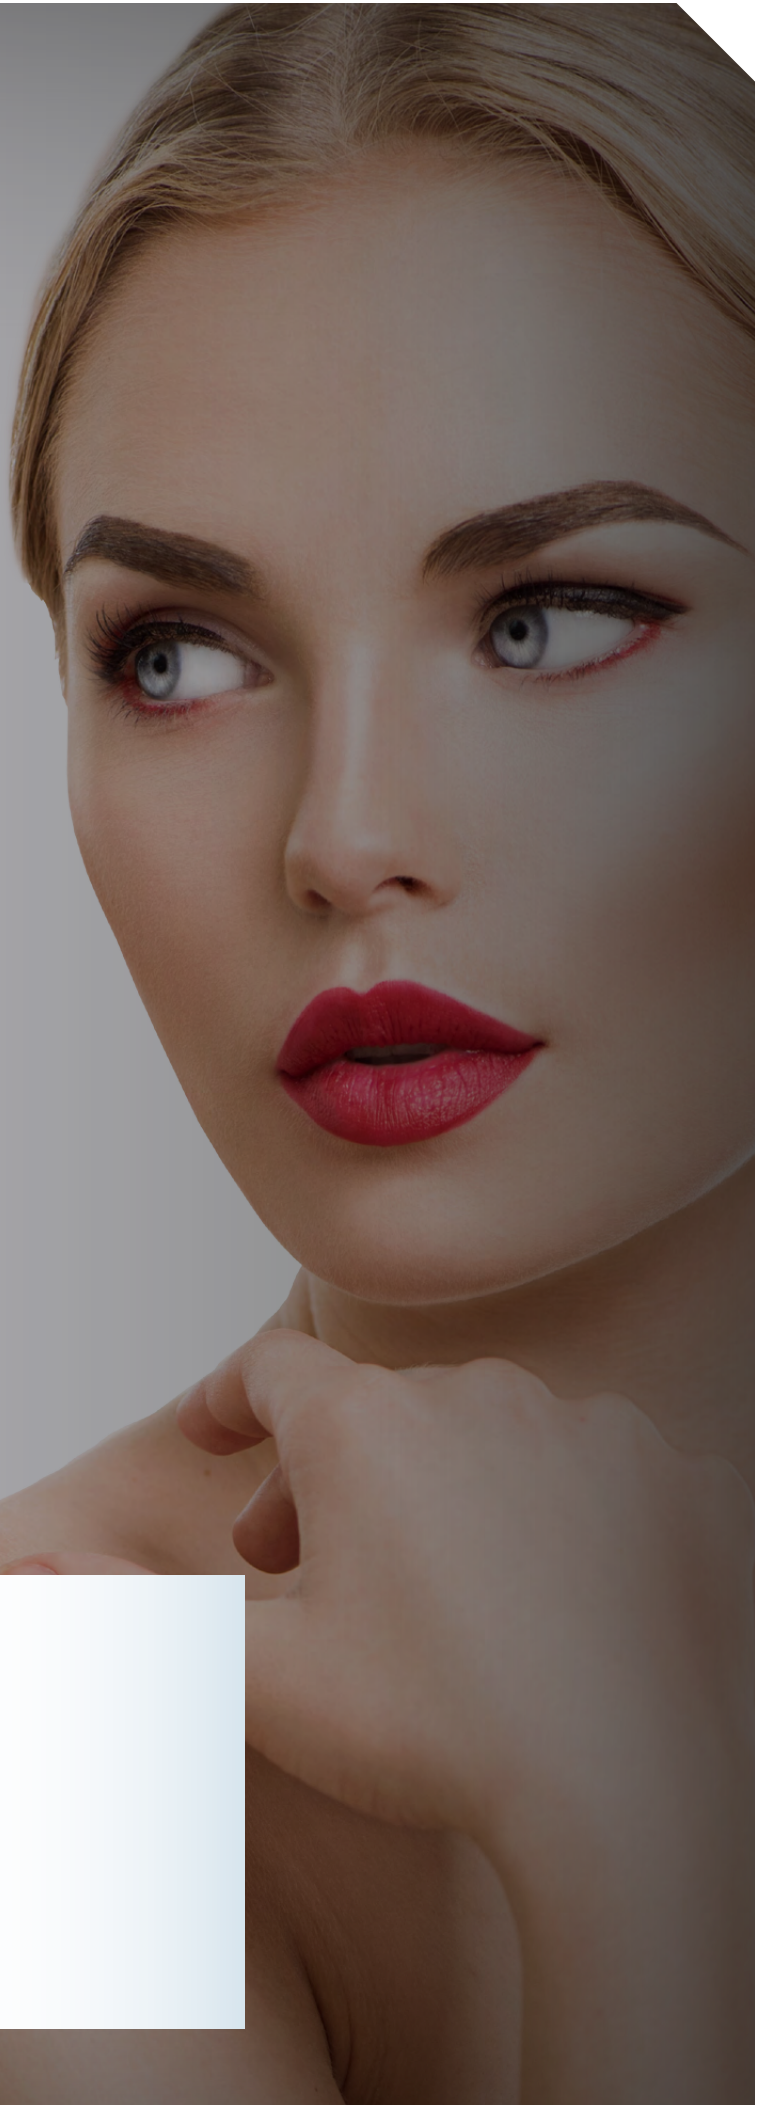

What else can be treated with PUREBEAU FIBROBLAST?

- ▷ Wrinkle smoothing, eyelid tightening
- ▷ And many applications more ...

PUREBEAU FIBROBLAST

Facts at a glance

Treatment time	1-2 hours including consultationh
